EDUCATION

Royal Melbourne Institute of Technology (RMIT) | Melbourne, Australia *July 2024 – July 2026*
Master of Information Technology

Chulalongkorn University | Bangkok, Thailand *Aug 2017 – May 2021*
Bachelor of Engineering - Chemical Engineering

ACADEMIC PROJECTS (RMIT UNIVERSITY)

Capstone Project – ClickPOS Thermal Printer Integration - *C#, ASP.NET Core, WebUSB*

- Developed a real-time thermal printer integration solution for ClickPOS Pty Ltd., a web-based point-of-sale platform used by retail businesses across Australia.
- Built a Windows host application in C# that communicates with USB/Ethernet thermal printers, enabling receipt and label printing from the web-based POS interface.
- Implemented ASP.NET Core SignalR for bidirectional, real-time communication between the web browser and the local printer host service.
- Integrated WebUSB API to allow direct browser-to-USB device communication without requiring additional native drivers.
- Configured printer connectivity via USB and Ethernet using low-level driver integration (Zadig) and socket-based communication protocols.
- Collaborated with the ClickPOS client throughout the semester, conducting testing sessions with a physical thermal printer provided by the client.
- Applied MVC architecture and clean code principles; produced full technical documentation including design specs, test plans, and a development guide.

Vendor Hire Website - *Next.js, React, TypeScript, GraphQL, TypeORM, MSSQL*

- Designed and developed a full-stack vendor hire website allowing vendors to list equipment and customers to browse and book rentals online.
- Built the front-end using Next.js and React with TypeScript, leveraging server-side rendering and a component-based architecture for performance and maintainability.
- Implemented GraphQL as the backend query layer for efficient, flexible data fetching and reduced over-fetching compared to traditional REST APIs.
- Used TypeORM to define and manage database schemas, table relationships, and migrations, connecting to an AWS-hosted database server.
- Implemented user authentication, vendor/customer role separation, booking management, input field validation, and unit testing to ensure code reliability.

iOS Car Park Booking Application - *Swift, iOS, MVC, REST APIs*

- Developed an iOS mobile application for online car park booking across Melbourne CBD.
- Integrated real-world REST APIs to retrieve and display live car park capacity data.
- Implemented search, date/time-based booking selection, and booking history features.
- Applied MVC architecture principles with responsive UI/UX design.

Mobile Banking Web Application - *C#, .NET Framework, Azure SQL, MVC*

- Designed and built a secure web-based banking system with user authentication and role-based authorization (Admin/User).
- Developed core features: Deposit, Withdraw, Transfer, and Bill Payment with full transaction history and export functionality.
- Integrated Azure SQL Server for database management of accounts and transactions.

AWS Cloud Computing - *AWS Lambda, S3, EC2, ECS, Event-Driven Architecture*

- Implemented AWS Lambda functions (class-based) for serverless compute, triggered automatically by AWS events such as S3 uploads and scheduled CloudWatch rules.
- Used Amazon S3 for object storage and configured event-driven automation to trigger Lambda functions on file upload events.
- Studied and applied EC2 for virtual machine provisioning and ECS for container orchestration to deploy and scale applications in the cloud.

Software Testing & Automation - *Selenium WebDriver, Spira Test*

- Performed test case management and defect tracking using SpiraTest.
- Designed and executed manual test cases for functional validation.
- Implemented automated regression testing using Selenium WebDriver.

PROFESSIONAL EXPERIENCE

Carpark Operations – RMIT / Commercial Carpark | Melbourne, Australia 2025 - 2026

Car Park Officer

- Managed day-to-day car park operations including monitoring bay occupancy, assisting customers, and ensuring smooth traffic flow.
- Handled email correspondence with customers and internal teams regarding bookings, complaints, and general enquiries.
- Performed account maintenance tasks including updating customer records, processing access passes, and resolving billing discrepancies.
- Solved operational problems independently daily, demonstrating strong communication skills and initiative in a customer-facing environment.

Gosoft | Bangkok, Thailand Aug 2022 – March 2024

Software Engineer (+ Business Analyst)

- Began in a Business Analyst role on the POS New Gen project and was promoted to Software Engineer based on performance.
- Researched the point-of-sale market to tailor features for Convenience Store POS systems; translated business requirements into technical specifications.
- Developed web applications using AWS services including Lambda and S3, leveraging serverless architecture for optimized performance and reliability.
- Built batch processing functions using Angular and Ant Design to improve user experience and operational efficiency.
- Developed JavaScript automation in AWS Lambda to monitor and recheck daily XML file signing failures, reducing manual intervention.
- Contributed to cross-functional teams using Node.js, Angular, C#.NET, TypeScript, and AWS across the full development lifecycle.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, C#.NET, Python, Java, Node.js

Front-End: React.js, Angular, Next.js, Ant Design

Back-End & APIs: ASP.NET Core, SignalR, GraphQL, TypeORM, REST APIs, WebUSB

Cloud (AWS): Lambda, S3, EC2, ECS, Event-Driven Architecture, RDS

Databases: Microsoft SQL Server (MSSQL), Azure SQL

Testing: Selenium WebDriver, SpiraTest, Unit Testing

Tools & Practices: Git, MVC Architecture, Agile/Scrum, Technical Documentation

Hardware Integration: Thermal Printer (USB/Ethernet), Windows Service, Driver Configuration

Soft Skills: Problem Solving, Cross-functional Collaboration, Client Communication
